

1. Data Sources

Alibaba Cluster Trace 2018

Salesforce/Borg 2011

GAIA

NetMan

2. Stress Protocol

Missing Points

Metric Outage

Delayed Telemetry

Burst / Level Shift

Noise Injection

Combined Stress

3. Evaluation Engine

Model Zoo

- DLinear
- RACE-DLinear
- PatchTST-lite

Input Builder

Create supervised Samples under each stress setting

Metrics Suite

Robustness

- Global MSE / MAE
- Per-metric MSE
- Robustness curves

Deployment Cost

- P95 Latency (ms)
- Peak Memory (GB)
- Model Size (MB)

Forecast-to-Capacity Proxy

- Forecast-to-capacity proxy
- Under-provisioning risk
- Over-provisioning cost

Selection Analysis

- Multi-objective ranking
- Clean vs. stressed
- Pareto frontier

Leaderboards

Robustness Reports

Capacity Risk Analysis

Case-study summaries

5. Case Studies & Insights

Operational Case Studies

Alibaba / Salesforce/Borg / GAIA
Representative stress cases

Model-Selection Guidance

Model choice under specific constraints
(latency budget, memory budget)

Insights & Guidelines

When clean evaluation misleads
Best practices for AIOps forecasting
